PROFESSIONAL SUMMARY

Java Full Stack Developer with 2+ years of experience building and enhancing enterprise applications using Java, Spring Boot, React.js, REST APIs, SQL and MongoDB, including a forms platform serving ~1,000–1,500 users per form with 500+ records created daily. Hands-on experience developing configurable, workflow-driven applications from feature requirements through implementation, API integration, testing and debugging. Experienced with dynamic forms, role-based access, validation, workflow routing, change tracking, pagination/filtering, microservice enhancements, M3 integrations, production troubleshooting and Agile delivery.

TECHNICAL SKILLS

Languages: Java, JavaScript (ES6+), SQL
Backend: Spring Boot, REST APIs, Microservices, DTOs, Exception Handling, Validation
Frontend: React.js, React Hooks, Custom Hooks, Redux, Context API, TanStack Query, React Router, Reusable Components
UI & Web: HTML5, CSS3, Material UI (MUI), Responsive UI, Dynamic Forms
Databases: MongoDB, SQL
Messaging & Integration: Apache Kafka (existing integration), WebSockets
Testing & Debugging: Integration Testing, API Testing, Manual Testing, Postman, Log Analysis
Tools & Delivery: Git, GitLab, Merge Requests/Code Reviews, Gradle, Docker

PROFESSIONAL EXPERIENCE

Associate Software Engineer | Infor India Pvt. Ltd. **Jul 2024 – Jan 2026**

- Developed and enhanced a configurable Intake Forms application for enterprise customer, supplier and parts master-data management (~10 forms, 3 roles per form, ~1,000–1,500 users per form, 500+ records created daily), working across React.js and Java/Spring Boot.
- Owned 3 core React modules and contributed bug fixes/features to 3 additional overlapping modules; integrated ~20 APIs on the frontend and worked on ~10 backend APIs across 3 Spring Boot microservices.
- Built configuration-driven forms supporting field types, mandatory/hidden/disabled states and rule-based visibility for intake users, reviewers and form-level access scenarios.
- Implemented dynamic field validation and dependent-field events, including conditional rules and auto-population of related fields based on user input, saving users significant manual data-entry time.
- Developed role-based access configuration UI and API integrations for administrators to manage user/reviewer access to forms and maintain user assignments.
- Implemented multi-step workflow functionality covering submission, reviewer approvals, rejection, request-for-change flows and conditional routing across teams based on form data.
- Integrated form fields with Infor M3/reference data through backend GET APIs and supported CSV-driven dropdown/reference data for configurable fields.
- Developed dashboard functionality with role-based record visibility, status tracking, pagination, sorting and filtering for customer, supplier and item records.
- Designed and implemented a change-tracking feature end-to-end: created hierarchical DTOs for old/new field values, added Spring Boot GET/POST APIs and MongoDB persistence, and integrated the data into the React review experience.
- Worked with Spring Boot Controller, Service, Repository and DTO layers; implemented validation, exception handling, HTTP responses and MongoDB document operations, while also enhancing existing APIs.
- Modified and deployed 3 microservices supporting the Intake Forms application; used SLF4J/Docker logs to investigate and resolve application issues and fixed numerous defects in existing code.
- Performed integration testing, API testing with Postman and manual end-to-end validation across frontend, backend and workflow scenarios; collaborated closely with QA to resolve defects.
- Participated in Agile ceremonies, GitLab merge-request/code-review workflows and feature discussions; provided knowledge transfer to team members.

Software Engineer | Albanero Solutions Pvt. Ltd. (acquired by Infor) **May 2024 – Jul 2024**

- Worked on the Data Mesh platform supporting enterprise data processing and migration workflows before continuing the work under Infor following the acquisition.
- Implemented frontend enhancements and Material UI fixes, and resolved backend validation issues in data-transformation functionality.
- Contributed to debugging, feature maintenance and data-management workflows using Java, React.js and SQL in an Agile engineering environment.

Software Engineer | Krisi Vahana Pvt. Ltd. **Jan 2026 – Aug 2026**

- Developed a responsive tomato-detection web interface using React.js, JavaScript, HTML5, CSS3 and Material UI, integrating Python-based detection to display ripe, unripe and damaged tomatoes through live camera testing.
- Implemented Python-based image processing, preprocessing and classification logic to support tomato detection and ripeness assessment, enabling real-world testing and validation of detection results.

SELECTED PROJECTS

ApplyTrack – Job Application Tracker | Java, Spring Boot, React.js, PostgreSQL, MongoDB, Material UI, TanStack Query Live Demo | GitHub

- Built a full-stack job application tracker with Spring Boot REST APIs (JWT authentication) and a React.js frontend, tracking applications across statuses with server-side pagination, sorting and filtering.
- Designed a two-database model: PostgreSQL for users, applications and resumes; MongoDB for job-description analyses and uploaded resume files (GridFS).
- Implemented keyword extraction on resumes and pasted job descriptions to calculate match scores and the skills each resume version is missing, with a resume-vs-JD checker on the Resumes page.
- Built a dashboard using MongoDB aggregation and Spring services to show response rate by resume version and top missing skills per resume, counted across distinct job descriptions; covered services with JUnit/Mockito tests.

Enterprise Data Mesh Platform | Java, Spring Boot, React.js, SQL, Apache Kafka, Infor M3

- Contributed to frontend and backend enhancements for a platform that processes, transforms and validates enterprise master data before loading it into Infor M3.
- Worked on UI/library fixes and backend validation issues within existing data-transformation workflows; supported production troubleshooting and maintenance.

EDUCATION

Bachelor of Technology (B.Tech) – Mechanical Engineering | KKR & KSR Institute of Technology and Sciences, Guntur | 2019–2023 | CGPA: 7.2/10
